DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 11, drawn to peptides and diagnostic method of use, classified in class 435, subclass 5. Election of species is further required.
- II. Claims 8-10, 12-14, drawn to nucleic acids, classified in class 536, subclass 23.72. Election of species is further required.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different kinds of chemical compounds, which are not used together and have different functions and different effects.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, divergent search requirements, and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Claims 1-14 are generic to a plurality of disclosed patentably distinct species comprising peptides or coding sequences involving:

- A. Spike peptides, seq 1-4
- B. M peptides, seq 5-6

C. N peptides, seq 7-8

D. N peptides, seq 9-11

E. N peptides, seq 12-15

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Species A-E are mutually distinct, because no species has any common structure with any of the other species. The nucleic acids involve different regions of the SARS genome, and the peptides have different immunological properties.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
